ARCHIBUS TEAMS

(Total Environmental Asset Management)

GREEN BUILDING MODULE

The Green Building module allows you to document and track your progress through the LEED certification or other sustainability certification process. Select a building and a certification type, and the module will walk you through the scoring process. As the process progresses, use the module to record comments and responses, upload documentation, and, ultimately, to save your final certification results.

Rolling this information up on a facility or enterprise basis allows organizations to compare the status of various sites, prepare summaries of their overall status, and identify best practices for achieving sustainability.

Features

- ✓ **Step-by-Step Scoring:** Walks you through the scoring system in a userfriendly interface.
- ✓ **Document Library:** Upload background information for reference and documentation.
- ✓ **Activity Log:** Track submissions, comments, responses, and revisions so you can see where you are on any project.
- ✓ **Enterprise-Wide Metrics:** See how your entire organization is doing on sustainable construction.
- ✓ **Integration:** Integrates with the ARCHIBUS Project Management and Capital Budgeting modules.

Possibilities

- Develop an integrated, enterprisewide sustainability program.
- Calculate cost savings for improving sustainability.
- Share practices between facilities; see what measures work best for your organization.
